# What is a Recurrent Neural Network (RNN)?

- RNN is a neural network with a feedback loop.
- Suitable for processing sequential/serial data

# Why process data serially?

- Limited computational capability
- Limited storage capability
- Need a response immediately
- More efficient to divide task into sub-tasks
- Data sequences have arbitrary/variable lengths

Configs

LSTM

Variants

Implement

3 / 30

# Example Applications

- Language modeling
- Sentiment analysis
- Machine translation
- Image captioning
- Time series analysis
- Speech/audio analysis
- Etc. etc..

# RNN Cell Models

- Multiple ways to introduce feedback

$h$  State transition function  
 $f$  Measurement function  
 $gD$  Feedback function with delay  
 $D$  Delay only

$x_t$  Current input  
 $y_t$  Current output  
 $s_t$  Current state

background

RNN Cells

Configs

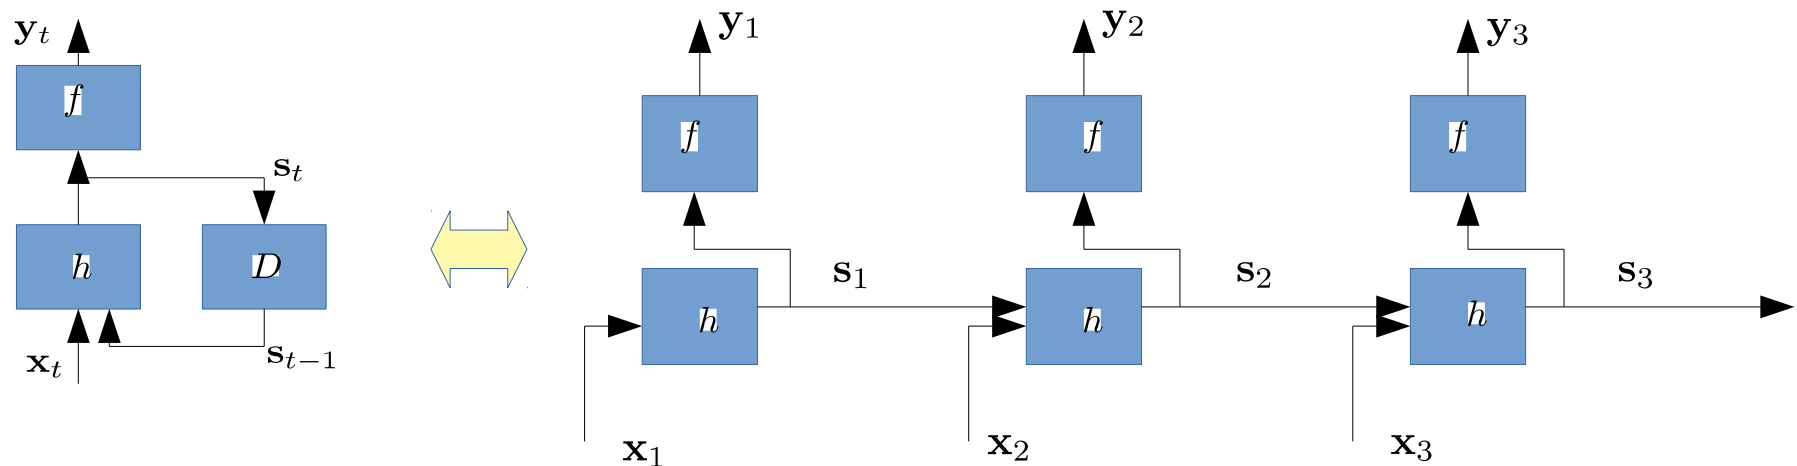

LSTM

Variants

Implement

# RNN Cell Unfolding

- Show the cell values at each time step

$$s_t = h(\mathbf{x}_t, \mathbf{s}_{t-1}) = \tanh(\mathbf{W}_h[\mathbf{x}_t, \mathbf{s}_{t-1}] + \mathbf{b}_h)$$

# RNN input/output configurations

- Multiple input- Single output
- Single input – Multiple output
- Single input – Single output
- No input – Multiple output
- Multiple input- Multiple output
  - $\#inputs = \#outputs$
  - $\#inputs \neq \#outputs$

background

RNN Cells

**Configs**

LSTM

Variants

Implement

8 / 30

# Single input-Multiple output

- Conditional sequence generation
  - Eg: Image captioning

background

RNN Cells

**Configs**

LSTM

Variants

Implement

9 / 30

# Single input- Single output

- Theoretically possible, but unusual

background

RNN Cells

Configs

LSTM

Variants

Implement

10 / 30

# No input - Multiple output

- Generation of sequence samples (Auto-regressive)
  - Eg: Text generation

background

RNN Cells

Configs

LSTM

Variants

Implement

11 / 30

# Multiple input- Single output

- Sequence classification
  - Eg; Sentiment analysis

background

RNN Cells

Configs

LSTM

Variants

Implement

12 / 30

# Multiple input - Multiple output (#inputs = #outputs)

- Sequence transformation
  - Eg: noise removal of a time series

background

RNN Cells

Configs

LSTM

Variants

Implement

13 / 30

# Multiple input- Multiple output (#inputs != #outputs)

- Unrestricted sequence transformation
- Encoder-Decoder architecture
  - Eg: Machine translation

background
